Summary

Senior Infrastructure/Platform Engineer specializing in distributed systems, GPU infrastructure, and Kubernetes platforms, with 5+ years across AI startups. Currently lead technical direction for Together AI's RL fine-tuning platform, from training orchestration to multi-cluster GPU scheduling on self-managed clusters. At earlier startups, cut GPU costs by 50%+ with hybrid-cloud infrastructure and shipped production inference at 60k+ req/hour.

Experience

Together AI — Amsterdam, Netherlands
Senior Platform Engineer, Research Platform — *July 2025 — Present*

- Designed and built Together AI's RL fine-tuning platform from scratch, and now lead technical direction and architecture across gRPC/HTTP APIs, async orchestration, GPU scheduling, and distributed storage, supporting multi-week runs on up to 256 H100/B200 GPUs
- Adopted Meta's Monarch actor framework into the RL platform, working closely with the PyTorch team on the Kubernetes integration, now powering multi-node GPU training and inference workflows for 7 research engineers
- Architected the platform's multi-tier capacity model with best-fit placement across dedicated, reserved, and shared GPU pools, with the latter two autoscaled to demand, eliminating manual capacity planning per customer tier
- Migrated platform workloads from a click-ops shared cluster to a Terraform-based, Karpenter-autoscaled EKS cluster, eliminating 1-hour manual node scaling and supporting 30+ concurrent per-PR preview environments via ArgoCD ApplicationSet generators
- Built RL integration and E2E test suites from scratch, running against the live preview environments, and hardened fine-tuning integration tests unlocking dedicated inference for 90+ base models
- Consolidated the team's observability from a fragmented setup into a unified Grafana Cloud stack with IaC-managed dashboards and alerting across 9+ K8s clusters, with new clusters now onboardable in minutes
- Modernized CI/CD, achieving a 4x speedup with BuildKit optimizations and delivering self-hosted GPU-based CI for 90+ engineers via ARC

iClerk — Remote
MLOps/DevOps Engineer, AI Platform — *July 2023 — July 2025 (part-time until March 2024)*

- Built a Terraform-managed platform across 4 environments, combining AWS EKS with Tailscale Operator-connected K3s GPU clusters and ArgoCD-deployed workloads, reducing GPU costs by >50% compared to hyperscaler pricing
- Established declarative K8s monitoring and alerting in Grafana Cloud across 3 clusters, cutting issue detection from ad hoc to under 1 hour
- Optimized a speech inference pipeline using WhisperX for ASR, NeMo for diarization, and Demucs for denoising on NVIDIA Triton with per-request model selection, achieving 11x speedup and 5x cost reduction on 1-hour audio inputs
- Delivered a multi-stage financial document parser using vision LLMs and LangGraph agents on an async Celery pipeline, achieving 70% end-to-end automation and landing a venture fund as the first client

Myna Labs (from the creators of Snap Lenses and Snap Cameos) — Remote
MLOps Engineer, Speech Synthesis — *November 2022 — March 2024*

- Architected and owned a speech inference platform on FastAPI, Celery, and NVIDIA Triton with per-domain priority queues for text-to-speech, voice conversion, and ASR, serving mobile and web apps at 60k+ req/hour
- Shipped a voice cloning service on Tortoise TTS using LoRA fine-tuning with precomputed speaker latents, cutting per-voice onboarding time from days to under 10 minutes, enabling custom voices in production
- Replatformed from Docker Compose to Terraform-provisioned GKE with an elastic GPU node pool across staging and production

Stealth Finance Startup (same founding team as iClerk) — Remote
Data Scientist, Quant Finance — *September 2021 — July 2022*

- Built a distributed PySpark pipeline that transformed S&P 500 news and analyst reports into daily company-level FinBERT sentiment features
- Developed ListNet-based learning-to-rank models for long-short equity selection, evaluated with nDCG, Sharpe, and Sortino

Education

Higher School of Economics — Moscow, Russia
B.S., Computer Science and Finance, summa cum laude — *September 2018 — July 2022*

- Ranked in the top 3% of the cohort
- Passed CFA Level 1 in February 2021, scoring in the top 10% of candidates worldwide

Skills

- **Languages**: Go, Python, Rust, C++, SQL, TypeScript
- **Infrastructure**: Kubernetes, EKS/GKE/K3s, Helm, ArgoCD, Karpenter, Docker, Terraform, Ansible, AWS/GCP, MAAS, NetBox, Nix
- **ML**: PyTorch, Monarch, vLLM, SGLang, NVIDIA Triton, TensorRT, ONNX, Volcano, Flyte, HuggingFace, W&B, DVC
- **Networking & Security**: InfiniBand/UFM, Tailscale, Cloudflare, OIDC, TLS/mTLS, IAM/RBAC
- **Observability**: Grafana, Prometheus, Loki, Alloy, OpenTelemetry, PagerDuty
- **API & Data**: gRPC, Protobuf, OpenAPI, Stainless, FastAPI, Kafka, RabbitMQ, Celery
- **Storage**: PostgreSQL, Redis, MongoDB, S3, Weka, VAST
